PROFESSIONAL SUMMARY

Computer Science & Engineering undergraduate (B.Tech, Expected 2027) and aspiring software engineer with hands-on experience building full-stack MERN applications, including an industrial ERP system and a retail inventory and billing platform. Skilled in React.js, Node.js, Express.js, MongoDB and REST API design, with practical experience in JWT authentication and role-based access control. Completed a technical internship at the DRDO CDP Division. Seeking an entry-level software engineering role to build reliable, user-focused applications.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript
- **Web Technologies:** HTML5, CSS3, JavaScript
- **Frontend:** React.js, Responsive Web Design
- **Backend:** Node.js, Express.js, REST APIs
- **Database:** MongoDB, MySQL
- **Tools:** Git, GitHub, Postman
- **Concepts:** CRUD Operations, REST APIs, JWT Authentication, Role-Based Access Control, Debugging, Problem Solving

PROJECTS

Industrial Flow ERP October 2026

GitHub: github.com/JagadishChandra998/Industrial-Flow-ERP-MERN

Tech Stack: *MERN Stack, React.js, Node.js, Express.js, MongoDB, Mongoose, JWT*

- **Problem:** Industrial sales teams handle customer enquiries, quotations, orders, stock and dispatch in separate tools or manual records, which causes delays, stock conflicts and poor order tracking.
- **Solution:** Developed a full-stack MERN ERP application that manages industrial sales workflows end to end: customer enquiries, quotations, sales orders, inventory reservations and dispatch operations.
- Implemented JWT authentication and role-based access control to secure each user role.

Retail Sales & Inventory Management System July 2026

GitHub: github.com/JagadishChandra998/store-inventory-billing-desk

Tech Stack: *MERN Stack, React.js, JavaScript, HTML, CSS, Node.js, Express.js, MongoDB, JWT*

- **Problem:** Small retail shops track products, stock, billing and sales manually, which causes stock mismatches, missed low-stock items, billing errors and no clear view of sales trends.
- **Solution:** Developed a full-stack retail application that manages products, inventory, billing and sales in one place.
- Implemented CRUD operations, JWT authentication and role-based access control for Admin and Staff users.
- Built a billing module with automatic stock updates and dashboards for sales trends and low-stock alerts.

Smart Energy Monitoring August 2026

GitHub: github.com/JagadishChandra998/Smart-Home-Energy-Monitor

Tech Stack: *React.js, Node.js, Express.js, MongoDB, JavaScript, HTML, CSS*

- **Problem:** Users have little visibility into electricity consumption and appliance usage, and no simple way to keep total usage within an energy limit.
- **Solution:** Developed a full-stack web application with a React.js frontend and a Node.js, Express.js and MongoDB backend for monitoring electricity consumption and appliance usage.
- Implemented priority-based appliance scheduling within a defined energy limit, along with a manual timetable for management.

EXPERIENCE

Technical Intern – DRDO Central Data Processing (CDP) Division 18 May – 17 June 2026 (One Month)

- Developed Smart Energy Monitoring as a hands-on web-based project.
- Analyzed power-consumption data and implemented priority-based appliance scheduling within defined energy limits.
- Applied programming, testing and problem-solving concepts during project development.

EDUCATION

B.Tech – Computer Science & Engineering Expected Graduation: 2027

Nalanda Institute of Technology | CGPA: 8.07

Higher Secondary (+2) – Science 2021 – 2023

NIST Higher Secondary School, Balasore, Odisha | Percentage: 67.3%

Secondary Education 2021

S.R High School (Baliapal) | Percentage: 83.5%
